Cookie Policy

AE CHEMIE, INC. | EFFECTIVE DATE: NOVEMBER 16, 2026

This Cookie Policy describes cookies and related browser storage used or potentially used on the AE Chemie website and the choices available to visitors.

1. What cookies and similar technologies are

Cookies are small data files placed by a website in a browser. Similar technologies include session identifiers and local browser storage (such as localStorage). Some are needed for sign-in or form operation; others, if enabled, may support site statistics or third-party content.

2. How AE Chemie may use them

Essential and security functions: Cookies or similar mechanisms may support login sessions, account access, security measures, prevention of misuse and core website operation.

Request-form continuity: Local browser storage may preserve unfinished selections in the Request a Sample and Request Technical Documentation forms, including products and requested options, as you move between pages or sign in. This draft information is stored in the browser until replaced, cleared by the form workflow or removed by the user through browser controls. Submitted requests are handled separately under the Privacy Policy.

Preferences and embedded services: Depending on the Website features and integrations actually enabled, browser storage or third-party content may remember preferences or load additional technologies.

Analytics or advertising: Such technologies may be present only if separately enabled. This Policy does not represent that particular analytics providers, ad networks or marketing cookies are installed. Their identities, purposes and lifetimes must be verified against the live website before a provider-specific inventory can be published.

3. Consent and controls

Where applicable law requires prior consent for non-essential cookies or similar technologies, those technologies should not be activated before the required choice has been obtained. You can control or delete cookies and local storage using your browser settings. Blocking essential storage may interfere with account login, form drafts or other services.

If the Website offers a cookie-preference panel, use that panel to adjust optional categories. If no preference panel is available, browser controls remain available; however, browser controls alone may not satisfy all legal requirements for non-essential tracking.

4. Third parties

Third-party sites or embedded resources may set their own cookies or identifiers when their content is used. Their practices are governed by their notices. We cannot identify the exact third-party cookies or expiration periods without checking the live deployment and its consent configuration.

5. Changes

We may update this Cookie Policy as site features or technologies change. Changes will be reflected in the effective date.
