Accessibility Statement

AE CHEMIE, INC. | EFFECTIVE DATE: NOVEMBER 16, 2026

This statement describes AE Chemie, Inc.'s approach to accessibility, the scope of its online services and how visitors can report barriers or request help.

1. Our approach

AE Chemie, Inc. aims to make its website and online customer services accessible to as many people as reasonably possible, including individuals who use assistive technologies. Accessibility is an ongoing process, and we welcome reports of barriers.

2. Website areas covered

This statement relates to the AE Chemie Website at https://aechemie.com, including product information, account access, request forms and online request history where available. External websites or third-party tools may have separate accessibility practices.

3. Accessibility practices

As the Website is maintained and updated, AE Chemie seeks to consider accessible navigation, text readability, clear form instructions, keyboard interaction and compatibility with commonly used assistive technologies.

The Web Content Accessibility Guidelines (WCAG) are a useful reference for evaluating website accessibility. This statement does not claim a specific WCAG conformance level or that an independent accessibility audit has been completed.

4. Known limitations and feedback

Some pages, downloadable files, interactive form elements or third-party integrations may not function optimally for every user or assistive technology. We encourage users to report specific difficulties so they can be investigated and prioritized.

When contacting us, please include the page address, a brief description of the barrier, the task you were attempting and, if comfortable sharing it, the device, browser or assistive technology involved. Please do not include account passwords or unnecessary sensitive personal information.

5. Requesting assistance or an alternative format

If you cannot access product information, submit a sample request, retrieve technical documentation or use an account feature, contact AE Chemie by email or telephone. We will review the request and seek a practical alternative means of assistance when feasible.

6. Review of this statement

We may update this Accessibility Statement following improvements to the Website or new accessibility information.
